Patent number :

 JP 59073370 A 19840425 [JP59073370]

Title :

OSCILLATING VEHICLE

Inventor(s) :

AOI KAZUO

Patent Assignee :

YAMAHA MOTOR CO LTD

Application Details :

JP18205682 19821019 [1982JP-0182056]

Main Int. Class :

B62D-057/00

Secondary Int. Class :

B62D-063/00

Abstract :

PURPOSE: To keep the maximum bank angle and get superior turning performance irrespective of arrangement of seat at a sufficiently low position by a method wherein the lateral width of a frame is made approximately equal to the lateral width of the seat.
CONSTITUTION: In case of turning the vehicle, a driver inclines body 68 and a frame 10 inwardly toward a turning direction along with his body and turns the vehicle with a bank angle. Full lateral width B of the frame 10 is approximately equal to the lateral widthA of a seat 70 and the frame 10 is not projected substantially from the seat 70 in the lateral direction, so that the bank angle may be kept large. Due to this arrangement, the vehicle can be driven with a large bank angle in case of turning operation, so that running performance during turning operation may not be deteriorated.
